

# 易忘知识点:

## 一. 分布函数

- 右连续, 故等号永远在“ $X$ 大于...”上。  
eg:  $F(x) = \begin{cases} 0 & (x < -1) \\ \frac{1}{2}x + \frac{1}{2} & (-1 \leq x < 0) \\ 1 & (x \geq 0) \end{cases}$
- 不一定左连续, 故  $P\{X \leq a\} = F(a)$ ,  $P\{X < a\} = \lim_{x \rightarrow a^-} F(x)$   
eg: 上述  $F(x)$ ,  $P\{X=0\} = P\{X \leq 0\} - P\{X < 0\} = F(0) - \lim_{x \rightarrow 0^-} F(x) = 1 - (\frac{1}{2} \times 0 + \frac{1}{2}) = \frac{1}{2}$

## 二. 常见离散型分布:

1. 二项分布  $X \sim B(n, p)$ , 强调做..... $n$ 次中, 有几次做成

$$P\{X=k\} = C_n^k p^k (1-p)^{n-k}, \quad EX = np, \quad DX = np(1-p)$$

2. 几何分布  $X \sim g(p)$ , 强调做.....直至做成, 需要的次数

$$P\{X=k\} = (1-p)^{k-1} p, \quad EX = \frac{1}{p}, \quad DX = \frac{1-p}{p^2}$$

3. 泊松分布  $X \sim P(\lambda)$ , 强调对某些事进行计数

$$P\{X=k\} = \frac{\lambda^k e^{-\lambda}}{k!}, \quad EX = \lambda, \quad DX = \lambda$$

## 三. 常见连续型分布:

1. 均匀分布  $X \sim U[a, b]$ , 即在某区间  $[a, b]$  等可能取值

$$p(x) = \frac{1}{b-a} \quad (a < x < b), \quad EX = \frac{a+b}{2}, \quad DX = \frac{(b-a)^2}{12}$$

2. 指数分布  $X \sim E(\lambda)$ , 即指数衰减

$$p(x) = \lambda \cdot e^{-\lambda x} \quad (x > 0), \quad EX = \frac{1}{\lambda}, \quad DX = \frac{1}{\lambda^2}$$

3. 正态分布  $X \sim N(\mu, \sigma^2)$ , 即任何形如  $p(x) = A e^{-ax^2+bx+c}$  ( $a > 0, x \in \mathbb{R}$ ) 的  $X$

$$p(x) = \frac{1}{\sqrt{2\pi}\sigma} e^{-\frac{(x-\mu)^2}{2\sigma^2}} \quad (x \in \mathbb{R}), \quad EX = \mu, \quad DX = \sigma^2$$

# 22-23 期中

一. 1. 解: 总事件数  $|U| = 10^3$ , 发生“最小号码恰为7”的事件数  $|A| = 4^3 - 3^3$

$$\text{故 } P(\text{“最小号码恰为7”}) = \frac{4^3 - 3^3}{10^3} = 0.037$$

$$2. \text{解: } P(\text{第3个生产是次品}) = \frac{P(\text{第3个生产且次品})}{P(\text{次品})} = \frac{0.4 \times 0.15}{0.2 \times 0.1 + 0.4 \times 0.15 \times 2} = \frac{3}{7}$$

$$3. \text{解: } P(B|A) = \frac{P(AB)}{P(A)} = \frac{1}{3}, \text{ 且 } P(A) = \frac{1}{4}, \text{ 故 } P(AB) = \frac{1}{12}, \text{ 又 } P(A|B) = \frac{P(AB)}{P(B)} = 0.5,$$

$$\text{故 } P(B) = \frac{\frac{1}{12}}{0.5} = \frac{1}{6}$$

$$4. \text{解: } P(x^2 + x + y^2 = 0 \text{ 有实根}) = P(x^2 - 4y^2 \geq 0) = P(x^2 \geq 4y^2)$$

$$\because X \sim U[0, 1], \text{ 故 } P_X(x) = \begin{cases} 1 & 0 < x < 1 \\ 0 & \text{其他} \end{cases}$$

$$\because Y \sim E(1), \text{ 故 } P_Y(y) = \begin{cases} e^{-y} & y > 0 \\ 0 & \text{其他} \end{cases}$$

$$\text{又 } X, Y \text{ 独立, 故 } P(x, y) = P_X(x) \times P_Y(y) = \begin{cases} e^{-y} & 0 < x < 1 \text{ 且 } y > 0 \\ 0 & \text{其他} \end{cases}$$

$$\therefore P(x^2 \geq 4y^2) = P(x \geq 2y) = \int_0^1 dx \int_0^{\frac{x}{2}} e^{-y} dy = \int_0^1 -e^{-y} \Big|_0^{\frac{x}{2}} dx$$

$$= \int_0^1 (1 - e^{-\frac{x}{2}}) dx = (x + 2e^{-\frac{x}{2}}) \Big|_0^1 = 1 + 2e^{-\frac{1}{2}} - 2e^0 = \frac{2}{\sqrt{e}} - 1$$

$$5. \text{解: } D(X) = \frac{(2-0)^2}{12} = \frac{1}{3}, \quad D(Y) = \frac{1}{0.5^2} = 4, \text{ 且 } X, Y \text{ 相互独立,}$$

$$\text{故 } D(X-3Y) = D(X) + 9D(Y) = \frac{1}{3} + 36 = \frac{109}{3}$$

$$\text{二. 解: } X \sim U[0, \pi], \text{ 故 } P_X(x) = \begin{cases} \frac{1}{\pi} & (0 \leq x \leq \pi) \\ 0 & \text{其他} \end{cases}, \text{ 故 } Y < 0 \text{ 或 } Y > 1 \text{ 时, } P_Y(y) = 0.$$

$$0 \leq Y \leq 1 \text{ 时, } F_Y(y) = P(-\infty < Y \leq y) = P(0 \leq Y \leq y) = P(0 \leq \sin X \leq y) =$$

$$P(0 \leq X \leq \arcsin y) + P(\pi - \arcsin y \leq X \leq \pi) = \int_0^{\arcsin y} P_X(x) dx + \int_{\pi - \arcsin y}^{\pi} P_X(x) dx$$

$$= \frac{2 \arcsin y}{\pi}, \text{ 故 } P_Y(y) = F'_Y(y) = \frac{2}{\pi \sqrt{1-y^2}}.$$

$$\text{综上, } P_Y(y) = \begin{cases} \frac{2}{\pi \sqrt{1-y^2}} & 0 \leq y \leq 1 \\ 0 & \text{其他} \end{cases}$$

三. 解:  $X \sim E(\frac{1}{5})$ , 故  $P_X(x) = \frac{1}{5} e^{-\frac{x}{5}}$ , 故对每一名顾客而言,  $P(\text{等候超过10分钟}) =$

$$\int_{10}^{\infty} P_X(x) dx = -e^{-\frac{x}{5}} \Big|_{10}^{\infty} = -0 + e^{-2} = e^{-2}, \text{ 故人数 } Y \sim B(50, e^{-2})$$

四. 解: (1)  $x < 0$  或  $x > 1$  时,  $P_X(x) = 0$ ,  $0 \leq x \leq 1$  时,  $P_X(x) = \int_{-\infty}^{\infty} P(x, y) dy$

$$= \int_{-x}^x 1 dy = 2x, \text{ 故 } P_X(x) = \begin{cases} 2x & (0 \leq x \leq 1) \\ 0 & \text{其他} \end{cases}$$

$$Y < -1 \text{ 或 } Y > 1 \text{ 时, } P_Y(y) = 0, -1 \leq y \leq 1 \text{ 时, } P_Y(y) = \int_{-\infty}^{\infty} P(x, y) dx = \int_{|y|}^1 1 dx = 1 - |y|$$

$$\text{故 } P_Y(y) = \begin{cases} 1+y & (-1 \leq y < 0) \\ 1-y & (0 \leq y \leq 1) \\ 0 & \text{其他} \end{cases}$$

$$(2). EX = \int_{-\infty}^{\infty} x P_X(x) dx = \int_0^1 2x^2 dx = \frac{2}{3} x^3 \Big|_0^1 = \frac{2}{3}; \quad EY = 0$$

$$DX = EX^2 - (EX)^2 = \int_{-\infty}^{\infty} x^2 P_X(x) dx - \frac{4}{9} = \int_0^1 2x^3 dx - \frac{4}{9} = \frac{1}{2} - \frac{4}{9} = \frac{1}{18}$$

$$DY = EY^2 - (EY)^2 = \int_{-\infty}^{\infty} y^2 P_Y(y) dy = \int_{-1}^0 (y^2 + y^2) dy + \int_0^1 (y^2 - y^2) dy = \frac{1}{12} + \frac{1}{12} = \frac{1}{6}$$

$$\text{cov}(X, Y) = E(XY) - EX \cdot EY = \iint xy P(x, y) dxdy - 0 = \int_0^1 dx \int_{-x}^x xy dy = 0$$

$$\text{故 } \rho = \frac{\text{cov}(X, Y)}{\sqrt{DX} \cdot \sqrt{DY}} = 0$$

$$(3). P(\frac{1}{2}, \frac{1}{2}) = 0, \quad P_X(\frac{1}{2}) \times P_Y(\frac{1}{2}) = 1 \times \frac{1}{2} = \frac{1}{2}, \text{ 两者不等, 故 } X, Y \text{ 不独立}$$

五. 解: (1) 解: 由  $\int_{-\infty}^{\infty} \int_{-\infty}^{\infty} P(x, y) dxdy = 1$  可得:  $0 + \int_0^1 dx \int_0^x kx dy = 1$

$$\text{LHS} = \int_0^1 kx^2 dx = \frac{k}{3} x^3 \Big|_0^1 = \frac{k}{3} = 1, \text{ 故 } k = 3$$

(2). 解: 设  $Z = X + Y$ , 故  $P(Z \leq 0) = P(Z \geq 2) = 0$ , 因此讨论  $F_Z(z)$ .

$$F_Z(z) = P(Z \leq z) = P(0 < X + Y \leq z) = P(Y < z - X), \text{ 因此分 } 0 < z < 1 \text{ 和 } 1 < z < 2 \text{ 讨论}$$

$$\textcircled{1} 0 < z < 1 \text{ 时, } F_Z(z) = \int_0^z dy \int_y^{z-y} 3x dx = \int_0^z \frac{3}{2} x^2 \Big|_y^{z-y} dy = \frac{3}{2} z \cdot \int_0^z (z-2y) dy = \frac{3}{8} z^3$$

$$\textcircled{2} 1 < z < 2 \text{ 时, } F_Z(z) = 1 - \int_{\frac{z}{2}}^1 dx \int_{z-x}^x 3x dy = 1 - \int_{\frac{z}{2}}^1 (6x^2 - 3zx) dx = -1 + \frac{2}{3} z - \frac{1}{8} z^3$$

$$\text{故求得: 设 } Z = X + Y, \quad P_Z(z) = \begin{cases} \frac{9}{8} z^2 & 0 < z < 1 \\ \frac{2}{3} - \frac{3}{8} z^2 & 1 < z < 2 \\ 0 & \text{其他} \end{cases}$$

# 23-24期中

一. 1. 解: 共有  $\frac{5 \times 4 \times 3}{3 \times 2} = 10$  种。其中抽卡结果为“1, 2, 4”, “1, 3, 4”, “2, 3, 5”,

“2, 4, 5”符合“最大数与最小数差为3”, 概率  $P = \frac{4}{10} = \frac{2}{5}$

2. 解:  $P(\text{第3个鲜品是次品}) = \frac{P(\text{第3个鲜品是次品})}{P(\text{次品})} = \frac{0.4 \times 0.15}{0.3 \times 0.1 + 0.3 \times 0.3 + 0.4 \times 0.15} = \frac{0.06}{0.18} = \frac{1}{3}$

3. 解: (1). 因为  $P(A \cap B) = 0$ , 故  $P(B) = P(A \cup B) - P(A) = 0.3$

(2). 因为  $P(A \cap B) = P(A) \times P(B)$ , 故  $P(B) = P(A \cup B) - P(A) + P(A \cap B) = 0.3 + 0.4 P(B)$ ,

解之:  $P(B) = 0.5$

4. 解:  $\because X \sim N(5, 6^2)$ , 故  $EX = 5$ , 故  $P(X < 5) = 0.5$ , 故  $P(1 < X < 5) = 0.5 - 0.1 = 0.4$

又由正态分布的对称性, 即得  $P(5 < X < 9) = 0.4$

5. 解:  $EX = 3$ ,  $DX = \frac{(6-0)^2}{12} = 3$ ;  $EY = 0$ ,  $DY = 4$ ;

$EZ = 3$ ,  $DZ = 3$ ; 又  $X, Y, Z$  相互独立, 故

$EW = EX - 2EY + 3EZ = 12$ ;  $DW = DX + 4DY + 9DZ = 46$

二. 解:  $\because X \sim N(0, 1)$ , 故  $P_X(x) = \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}}$ , 显然  $P(Y < 0) = 0$ , 故考虑  $Y \geq 0$  时,

$F_Y(y) = P\{-\infty < Y \leq y\} = P\{0 \leq Y \leq y\} = P\{0 \leq \sqrt{|X|} \leq y\} = P\{|X| \leq y^2\}$

$= P\{-y^2 \leq X \leq y^2\} = \int_{-y^2}^{y^2} \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}} dx = \int_0^{y^2} \frac{\sqrt{x}}{\sqrt{\pi}} e^{-\frac{x}{2}} dx$

故  $y \geq 0$  时,  $P_Y(y) = 2y \cdot \frac{\sqrt{x}}{\sqrt{\pi}} e^{-\frac{x}{2}} \Big|_0^{y^2} = \begin{cases} \frac{2\sqrt{x}}{\sqrt{\pi}} y e^{-\frac{x}{2}} & y \geq 0 \\ 0 & \text{其他} \end{cases}$

三. 解: (1)  $\int_{-\infty}^{\infty} \int_{-\infty}^{\infty} P(x, y) dx dy = 1$ , 故  $\int_0^1 dx \int_0^x ky(2-x) dy = 1$ ,  $LHS = \int_0^1 dx \cdot \frac{k}{2} (2-x)^2 \Big|_0^x$

$= \int_0^1 \frac{k}{2} (2x^2 - x^3) dx = \left( \frac{k}{3} x^3 - \frac{k}{8} x^4 \right) \Big|_0^1 = \frac{5}{24} k = 1$ , 故  $k = \frac{24}{5}$

(2)  $0 \leq x < 1$ ,  $P_X(x) = \int_{-\infty}^{\infty} P(x, y) dy = \int_0^x \frac{24}{5} (2-x) \cdot y dy = \frac{12}{5} (2-x) \cdot y^2 \Big|_0^x = \frac{24}{5} x^2 - \frac{12}{5} x^3$

故  $P_X(x) = \begin{cases} \frac{24}{5} x^2 - \frac{12}{5} x^3 & (0 \leq x < 1) \\ 0 & \text{其他} \end{cases}$

$0 \leq y < 1$ ,  $P_Y(y) = \int_{-\infty}^{\infty} P(x, y) dx = \int_y^1 \frac{24}{5} y \cdot (2-x) dx = \frac{12}{5} y \cdot (4x - x^2) \Big|_y^1$

$= \frac{12}{5} y (3 - 4y + y^2) = \frac{36}{5} y - \frac{48}{5} y^2 + \frac{12}{5} y^3$ , 故  $P_Y(y) = \begin{cases} \frac{12}{5} y^3 - \frac{48}{5} y^2 + \frac{36}{5} y & (0 \leq y < 1) \\ 0 & \text{其他} \end{cases}$

四. 解: (1)  $P_X(x) = \begin{cases} 1 & (0 \leq x \leq 1) \\ 0 & \text{其他} \end{cases}$ ,  $P_Y(y) = \begin{cases} e^{-y} & (y > 0) \\ 0 & \text{其他} \end{cases}$

$\because X, Y$  相互独立, 故  $P(x, y) = \begin{cases} e^{-y} & (0 \leq x \leq 1 \text{ 且 } y > 0) \\ 0 & \text{其他} \end{cases}$

故  $P(X+Y < 2) = \int_0^1 dx \int_0^{2-x} P(x, y) dy = \int_0^1 dx \int_0^{2-x} e^{-y} dy = \int_0^1 -e^{-y} \Big|_0^{2-x} dx$

$\int_0^1 (1 - e^{x-2}) dx = (x - e^{x-2}) \Big|_0^1 = 1 - e^{-1} - 0 + e^{-2} = 1 - e^{-1} + e^{-2}$

(2) 解: 由  $P(x, y)$  易知,  $P(Z < 0) = 0$ , 故考虑  $Z \geq 0$  时.

①  $0 \leq Z \leq 1$ , 此时  $F_Z(z) = P\{-\infty < Z \leq z\} = P\{0 \leq Z \leq z\} = P\{X+Y \leq z\}$

$= \int_0^z dx \int_0^{z-x} e^{-y} dy = \int_0^z -e^{-y} \Big|_0^{z-x} dx = \int_0^z (1 - e^{\frac{1}{2}(x-z)}) dx = (x - 2e^{\frac{1}{2}(x-z)}) \Big|_0^z$

$= z - 2e^0 - 0 + 2e^{-\frac{z}{2}} = z - 2 + 2e^{-\frac{z}{2}}$

②  $z > 1$ , 此时  $F_Z(z) = \int_0^1 dx \int_0^{z-x} e^{-y} dy = \int_0^1 (1 - e^{\frac{1}{2}(x-z)}) dx = (x - 2e^{\frac{1}{2}(x-z)}) \Big|_0^1$

$= 1 - 2e^{\frac{1}{2}(1-z)} - 0 + 2e^{-\frac{z}{2}} = 1 - 2e^{\frac{1}{2}-\frac{z}{2}} + 2e^{-\frac{z}{2}}$

故求得:  $P_Z(z) = \begin{cases} 1 - e^{-\frac{z}{2}} & (0 \leq z \leq 1) \\ (1-e^{-1})e^{-\frac{z}{2}} & (z > 1) \\ 0 & \text{其他} \end{cases}$

五. 解: 设  $Z = \min_{1 \leq i \leq n} X_i$ , 故  $z < 0$  或  $z \geq 1$  时,  $P_Z(z) = 0$ ;  $0 \leq z < 1$  时,

$F_Z(z) = P\{0 \leq Z \leq z\} = \prod_{i=1}^n P\{X_i \geq z\} = \prod_{i=1}^n (1-z) = (1-z)^n$ , 故  $P_Z(z) = n \cdot (1-z)^{n-1}$

故  $EZ = \int_{-\infty}^{\infty} z P_Z(z) dz = \int_0^1 z \cdot n(1-z)^{n-1} dz$ , 设  $u = 1-z$ , 故  $EZ = \int_0^1 (1-u) \cdot n \cdot u^{n-1} du$

$= \int_0^1 n \cdot u^{n-1} du - \int_0^1 n \cdot u^n du = u^n \Big|_0^1 - \frac{n}{n+1} u^{n+1} \Big|_0^1 = 1 - \frac{n}{n+1} = \frac{1}{n+1}$

六. 解:  $10 \leq X \leq Y$  时,  $W = 50 \times (15-X) + 100 \times X = 50X + 750$

$Y < X \leq 20$  时,  $W = 15 \times 100 - 20 \times (X-15) = 1800 - 20X$

故  $EW = \int_{10}^{15} \frac{1}{10} (50X + 750) dx + \int_{15}^{20} \frac{1}{10} (1800 - 20X) dx$

$= \left( \frac{5}{2} x^2 + 75x \right) \Big|_{10}^{15} + \left( 180x - x^2 \right) \Big|_{15}^{20}$

$= 1412.5$

# 24-25 期中

1. 解:  $\because P(X < 15) = P(X > 35)$ , 故  $\mu = \frac{15+35}{2} = 25$ , 故设  $Y = \frac{X-\mu}{\sigma} = \frac{X-25}{6}$ ,

故  $Y \sim N(0, 1)$ , 故由  $\Phi(2) = 0.977$  得:  $P(Y \leq 2) = 0.977$ , 故  $P(Y > 2) = 0.023$ ,

故  $P(Y < -2) = 0.023$ , 故  $P(|Y| \leq 2) = 1 - 2 \times 0.023 = 0.954$

即  $P(\frac{|X-\mu|}{6} \leq 2) = 0.954$ , 故  $C = 2 \times 6 = 12$

2. (a) 解:  $P(A) = P(\text{发表} | A)P(A) + P(\text{发表} | B)P(B) = 0.95 \times 0.3 + 0.7 \times 0.7 = 0.285 + 0.49 = 0.775$

(b) 解:  $P(\text{来自A} | \text{发表}) = \frac{P(A \text{且发表})}{P(\text{发表})} = \frac{0.285}{0.775} = \frac{57}{155}$

3. 解: (a).  $P(\text{拿到3道}) = \frac{C_4^3 \times C_1^2}{C_5^5} = \frac{4 \times 1 \times 1 \times 1}{3 \times 2 \times 1 \times 1} = \frac{20}{273}$

(b).  $P(\text{至少拿到1道}) = 1 - P(\text{拿到0道}) = 1 - \frac{C_1^0}{C_5^5} = \frac{11}{13}$

4. 解:  $P_X(x) = \begin{cases} xe^{-\frac{x}{2}} & x > 0 \\ 0 & x \leq 0 \end{cases}$ ,  $Y = X^2$ , 故显然  $P(Y \leq 0) = 0$ ,

$Y > 0$  时,  $F_Y(y) = P\{Y \leq y\} = P\{0 < Y \leq y\} = P\{0 < X^2 \leq y\} = P\{-\sqrt{y} \leq X \leq \sqrt{y}\}$

$= \int_{-\sqrt{y}}^{\sqrt{y}} P_X(x) dx = 0 + \int_0^{\sqrt{y}} xe^{-\frac{x}{2}} dx = -e^{-\frac{x}{2}} \Big|_0^{\sqrt{y}} = 1 - e^{-\frac{\sqrt{y}}{2}}$

故此时有  $P_Y(y) = F'_Y(y) = \frac{1}{2}e^{-\frac{\sqrt{y}}{2}}$

综上  $P_Y(y) = \begin{cases} \frac{1}{2}e^{-\frac{\sqrt{y}}{2}} & (y > 0) \\ 0 & (y \leq 0) \end{cases}$

5 (a) 解: (i)  $\int_{-\infty}^{+\infty} P(x) dx = 1$ , 故  $0 + \int_{-c}^c \frac{3}{16}x^2 dx = 1$ , 即  $\frac{x^3}{16} \Big|_{-c}^c = 1$ , 故  $C = 2$

(ii)  $x < -2$  时,  $F_X(x) = 0$ ;  $x \geq 2$  时,  $F_X(x) = 1$ .

$-2 \leq x < 2$  时,  $F_X(x) = P\{-2 \leq X < x\} = \int_{-2}^x \frac{3}{16}t^2 dt = \frac{t^3}{16} \Big|_{-2}^x = \frac{x^3+8}{16}$

故  $F(x) = \begin{cases} 0 & (x < -2) \\ \frac{x^3+8}{16} & (-2 \leq x < 2) \\ 1 & (x \geq 2) \end{cases}$

(iii)  $EX = \int_{-\infty}^{+\infty} xP(x) dx = 0 + \int_{-2}^2 x \cdot \frac{3}{16}x^2 dx = \frac{3}{64}x^4 \Big|_{-2}^2 = 0$

$EX^2 = \int_{-\infty}^{+\infty} x^2P(x) dx = 0 + \int_{-2}^2 x^2 \cdot \frac{3}{16}x^2 dx = \frac{3}{80}x^5 \Big|_{-2}^2 = \frac{12}{5}$

故  $DX = EX^2 - (EX)^2 = 2.4$

(b) 解: (i)  $\int_{-\infty}^{+\infty} P(x) dx = 1$ , 即  $\int_0^1 \frac{C}{\sqrt{x}} dx = 1$ , 即  $2C\sqrt{x} \Big|_0^1 = 1$ , 故  $C = \frac{1}{2}$

(ii)  $x \leq 0$  时,  $F(x) = 0$ ;  $x \geq 1$  时,  $F(x) = 1$ ;  $0 < x < 1$  时,  $F(x) = P(0 < X < x)$

$= \int_0^x \frac{1}{2\sqrt{t}} dt = \sqrt{t} \Big|_0^x = \sqrt{x}$ , 故综上  $F_X(x) = \begin{cases} 0 & (x < 0) \\ \sqrt{x} & (0 \leq x < 1) \\ 1 & (x \geq 1) \end{cases}$

(iii)  $EX = \int_{-\infty}^{+\infty} xP(x) dx = \int_0^1 x \cdot \frac{1}{2\sqrt{x}} dx = \int_0^1 \frac{\sqrt{x}}{2} dx = \frac{1}{3}x^{\frac{3}{2}} \Big|_0^1 = \frac{1}{3}$

$EX^2 = \int_{-\infty}^{+\infty} x^2P(x) dx = \int_0^1 x^2 \cdot \frac{1}{2\sqrt{x}} dx = \int_0^1 \frac{x^{\frac{3}{2}}}{2} dx = \frac{1}{5}x^{\frac{5}{2}} \Big|_0^1 = \frac{1}{5}$

故  $DX = EX^2 - (EX)^2 = \frac{1}{5} - \frac{1}{9} = \frac{4}{45}$

6. (a) 解:  $X, Y$  联合分布列为:

| $Y \backslash X$ | 0             | 1             | 2             |
|------------------|---------------|---------------|---------------|
| 0                | $\frac{1}{9}$ | $\frac{1}{9}$ | $\frac{1}{9}$ |
| 1                | $\frac{1}{9}$ | $\frac{1}{9}$ | $\frac{1}{9}$ |
| 2                | $\frac{1}{9}$ | $\frac{1}{9}$ | $\frac{1}{9}$ |

, 故  $Z$  可能取 0, 1, 2, 3, 4

$X, Z$  联合分布列为:

| $Z \backslash X$ | 0             | 1             | 2             | 3             | 4             |
|------------------|---------------|---------------|---------------|---------------|---------------|
| 0                | $\frac{1}{9}$ | $\frac{1}{9}$ | $\frac{1}{9}$ | 0             | 0             |
| 1                | 0             | $\frac{1}{9}$ | $\frac{1}{9}$ | $\frac{1}{9}$ | 0             |
| 2                | 0             | 0             | $\frac{1}{9}$ | $\frac{1}{9}$ | $\frac{1}{9}$ |

(b) 解:  $P_X(x) = \begin{pmatrix} 0 & 1 & 2 \\ \frac{1}{3} & \frac{1}{3} & \frac{1}{3} \end{pmatrix}$

(c) 解:  $P_Z(z) = \begin{pmatrix} 0 & 1 & 2 & 3 & 4 \\ \frac{1}{9} & \frac{1}{6} & \frac{1}{3} & \frac{1}{6} & \frac{1}{9} \end{pmatrix}$

(d) 解: 不独立, 因为  $P(1, 1) = \frac{1}{9}$ , 但  $P_X(1) \times P_Z(1) = \frac{1}{3} \times \frac{1}{6} = \frac{1}{18}$ , 不等.

7. (a) 解:  $P_X(x) = \int_{-\infty}^{+\infty} P(x, y) dy = \int_0^1 (x+y) dy = x \cdot y + \frac{1}{2}y^2 \Big|_0^1 = \frac{1}{2} + x \quad (0 \leq x \leq 1)$

同理  $P_Y(y) = \frac{1}{2} + y \quad (0 \leq y \leq 1)$

(b) 解: 不独立, 因为  $P(\frac{1}{3}, \frac{1}{3}) = \frac{2}{3}$ , 但  $P_X(\frac{1}{3}) \times P_Y(\frac{1}{3}) = \frac{5}{6} \times \frac{5}{6} = \frac{25}{36}$ , 显然不等.

(c) 解:  $EX = \int_0^1 xP_X(x) dx = \int_0^1 (\frac{x}{2} + x^2) dx = (\frac{x^2}{4} + \frac{x^3}{3}) \Big|_0^1 = \frac{7}{12}$

$EX^2 = \int_0^1 x^2P_X(x) dx = \int_0^1 (\frac{x^3}{2} + x^3) dx = (\frac{x^4}{6} + \frac{x^4}{4}) \Big|_0^1 = \frac{5}{12}$

故  $DX = \frac{5}{12} - \frac{49}{144} = \frac{11}{144}$ , 同理  $EY = \frac{7}{12}$ ,  $DY = \frac{11}{144}$

(d) 解:  $P(X \leq Y) = \int_0^1 dy \int_0^y P(x, y) dx = \int_0^1 dy \int_0^y (x+y) dx = \int_0^1 \frac{3}{2}y^2 dy = \frac{1}{2}$

(e) 解:  $z < 0$  或  $z > 2$  时,  $P(z) = 0$ ; 考虑  $0 \leq z < 1$ :

$F_Z(z) = P\{Z \leq z\} = P\{Y \leq z - X\} = \int_0^z dx \int_0^{z-x} (x+y) dy = \int_0^z (\frac{1}{2}z^2 - \frac{1}{2}x^2) dx = \frac{1}{3}z^3$

②.  $1 \leq z \leq 2$ :  $F_Z(z) = P\{Z \leq z\} = P\{Y \leq z - X\} = 1 - P\{Y \geq z - X\}$

$= 1 - \int_{z-1}^1 dx \int_{z-x}^1 (x+y) dy = 1 - \int_{z-1}^1 (\frac{1}{2}x^2 + x - \frac{1}{2}z^2 + \frac{1}{2}) dx = -\frac{z^3}{3} + z^2 - \frac{1}{3}$

故综上:  $P_Z(z) = \begin{cases} z^2 & 0 \leq z < 1 \\ -z^3 + 2z^2 & 1 \leq z \leq 2 \\ 0 & \text{其他} \end{cases}$

8 (a) 解:  $X, Y$  的分布列为:

| $Y \backslash X$ | 0             | 1             | 2             |
|------------------|---------------|---------------|---------------|
| -1               | 0             | $\frac{1}{4}$ | 0             |
| 0                | $\frac{1}{4}$ | 0             | $\frac{1}{4}$ |
| 1                | 0             | $\frac{1}{4}$ | 0             |

故  $X$  边缘分布  $\begin{pmatrix} 0 & 1 & 2 \\ \frac{1}{4} & \frac{1}{2} & \frac{1}{4} \end{pmatrix}$

$Y$  边缘分布  $\begin{pmatrix} -1 & 0 & 1 \\ \frac{1}{4} & \frac{1}{2} & \frac{1}{4} \end{pmatrix}$

故  $P(1, 0) = 0$

但  $P_X(1) \times P_Y(0) = \frac{1}{4}$ , 故不独立

(b)  $EX = 1$ ,  $EY = 0$ ;  $EXY = \frac{1}{4} \times (-1) + \frac{1}{4} \times 0 + \frac{1}{4} \times 0 + \frac{1}{4} \times 1 = 0$

故  $\text{cov}(X, Y) = EXY - EX \cdot EY = 0$ , 故  $P(x, y) = 0$
